/159 cont./

726

/footnote 30 cont./ greater importance, and a true fight with sticks, machetes, and arrows took place between the Makú and the Taryana, again on the occasion of a caxirí.

578

There are, however, frequent fights for economic reasons (attacks on a clearing, cacurí, etc.). Not rarely there are quarrels due to intrigues, and the greater percentage of these happen among the women.

For revenge among themselves, the opportunity is drunkenness (31),

31. In order to have greater courage "he will get intoxicated," said one from Colombia. For this reason there are never duels among them. It is not reported either that they might engage in wrestling for exercise. During the fights they use any object that they have handy, machete, mortar, bow, etc., or even a shotgun!

and beforehand they invite for the celebrations those from whom they might want to get satisfaction. After this, even when the consequence is the victim's death, nothing in the Indian reveals repentance or remorse (32).

32. Years ago, in 1933, an episode of revenge with circumstances of special cruelty took place. In Ananaz, on the lower Uaupés, the Tukano killed two Desana men, cut a boy in half from the shoulder to the legs. The ones accused were taken to S. Gabriel (today the /this footnote is continued on the next page in the original source/ town of Uaupés) and questioned by the Inspector of the S.P.I. (Serviço de Proteção ao Índio). Without difficulty they confessed to the crime. -- But why did you kill them? -- "That is the way it is" was the only answer.

/159 cont./

578 The legends refer to similar episodes, and perhaps they try to imitate their legendary heroes.

278 /160/ a) The most common method of revenge, nevertheless, is poisoning. When they talk to us with intimacy and frankness, the natives affirm and document numerous cases of poisonings for revenge. From which one understands the general fear that dominates everyone, almost an obsession about being poisoned. Some revealed to us that they had been victims, they themselves, of poisonings that caused them serious and prolonged illnesses. We also know of cases in circumstances such that, according to the account of the Rvdas. Irmãs Enfermeiras /Reverend Sisters in charge of the sick/, they admit the suspicion of poisoning. Among these, we recall here two cases that happened during our travels. It was a matter of a more odious form of revenge, that is, to cause harm to the younger children in order to get satisfaction for injuries caused by their parents. Two children about ten years old, students of the Salesian Mission: a girl from Iauareté in Apríl of 1955, and a boy from Parí-cachoeira in October of 1956. Both died at the end of a few hours, after ingesting native drinks.

266 They do not, however, practice anthropophagy, and nothing reveals that they had had this custom in the Tukano group of tribes (cf. below what will be said about Cannibalism, VII - 6, h /sic; see VII, 4, h/).

19) Vanity.

826 Vanity is a strongly pronounced trait of the native psyche. The mothers tie bindings on the babies in arms, below the knee and above the ankle, "in order to thicken their legs." Actually, on the whole, they are anatomically well proportioned and elegant, with well-formed legs. They want to have thick legs. It is one of the insults, especially among the girls, to call one another skinny leg (33).

*[192] 33. Insults in Tukano: skinny leg, bõ̃xkã-dyí-Marĩgõ̃; curly hair, poári-subi; big eye, kaxpéri-bũhũgõ̃.

/468 cont./

756 cases. It is not known, however, whether there are more frequent meetings, at certain times, whether there are rites, or which acts [622] they practice then. It is known, indeed, that the paje often convenes the Komũã, in order to resolve the sanitary problems of the maloca or povoado (see VII - 2, e (3)).

562 4) A Tukano informant, Dorotéia Brito, spoke of womens' meet-
• 578 ings inside the maloca, during which they reveal among themselves
[115] the bad treatment that they receive from the men. We were not able, however, to verify whether it is a matter of true meetings of a secret society, as defense of class. Or instead, as seems more likely, casual, although frequent meetings of women, during which they open their hearts, revealing their own complaints. It is certain that at times, by the law of exogamy, all the women are from a certain tribe, to which they go to relate anything bad their husbands say against it, from which arise disputes and vengeance. This happens in a very regular way, and with a previous understand-
*[192] ing of the women among themselves. These tales by the women are called ukhá.

h) Social classes.

565 Among these Indians there is no true social stratification or social Classes, in the sense that there are privileged positions, perhaps lifelong and hereditary, with differentiation of tasks, diversity of rights and even of peculiar customs (in the dwelling, clothing, badges, emblems, etc.), as happens in more complex cultural forms. Within the maloca there are no lords and nobles, just
565 as there are no slaves (105);
567

> 105. In practice the Makú serve as slaves. It is a matter, however, of another tribe, racially, linguistically, and culturally different. Perhaps one can not even truly say slaves, since in exchange for work they receive protection and food. Once the tasks are finished (clearing, aturás /carrying baskets/, etc.) the Makú may leave, just as they may also constitute their maloca with their tuxaua.

/468 cont./

565 but an admirable equality of rights and duties, as well as of prop-
567 erty and of work.

Various circumstances justify such inexistence of classes: 1st, it is a matter of numerically small groups; 2nd, the warm and humid climate, if it facilitates a supply of the necessary food at all /469/ times of the year, it does not allow an abundant pro-
• [578] visioning and the development of riches. Now, where there are
[692] no rich people, there are no classes, neither masters nor slaves; 3rd, the life in common, which the conditions introduced and tradition established; 4th, the fear of the envy that the well-being of one might cause in the others, and that so many times is manifested even in connection with the small inequalities (see V - 14); 5th, the lack of a tribunal to restore rights and indemnify damages.

3) Linguistic group.

a) Linguistic group.

619 Above the local Group, among the populations of the Amazonian Northwest, there is only the linguistic group. It is made up of several local groups, forming at times a total of thousands of individuals, with the following elements in common: 1st, they claim to be from one and the same tribe or nation and, therefore, consider themselves "brothers"; 2nd, they speak the same language; 3rd, marriage between them is definitely forbidden.

It is, then, a matter of an ethnic unit only. The groups that constitute it never gather together, they do not own property that might be said to be in common: house, land, fishing waters of such a tribe, etc. Because of the distances the relations between groups from different tribes are more frequent than between groups of the same tribe.

There is, then, no social or political organization of an entire
[622] tribe; and the elders do not recall of ever having heard of such an organization. There has indeed been some tuxaua with greater ascendancy and whom other tuxauas consulted and whose advice

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

regarded themselves as the superior of all other Indians who were driven back into the headwaters (Giacone, 1949, p. 5).

Thus the movement of Colombian settlers down the Vaupés River had a markedly disturbing effect upon the Cubeo by dispossessing them from their ancestral river. The first-ranking sibs, however, did not leave their sites at the rapids from whence their ancestors are supposed to have emerged. But in staying on they succumbed most rapidly to the European influence.

Despite their strong orientation toward the river the Cubeo also make use of footpaths. Near the mouth of the Cuduiarí, for example, a trail leads to the Querarí. There are, in fact, many paths in the region that provide short cuts between rivers. Raiding parties come on foot to avoid detection, and paths are used for short journeys. The Cubeo Indian, however, is not, by preference, a walker.

SIZE

The size of a clearing is variable, to a degree, depending upon the number of households and their ambitions for entertaining and for trade with the whites. A headman's household, which is always the most ambitious and is, therefore, the most productive, requires approximately two acres of manioc land for an annual yield of 300 baskets (50–60 pounds per basket). Most households among the *Bahúkiwa* averaged only 200 baskets of manioc a year and utilized accordingly a manioc garden of one acre. A sib center community of 12 households requires more than 12 acres for manioc cultivation as well as several acres more for the plaza and subsidiary cultivations, if the full burden of entertaining is left to one or two households, as is often the case. Satellite communities are often as small as three households and their clearings are proportionately smaller.

The Cubeo community is always small, rarely reaching a population beyond 16 households, a household in every case being limited to a nuclear family. The size of community seems to be a result of a complex series of adaptations of many elements to one another—architectural, ecological, sociological, and psychological. The architectural factor is that a community must be dominated by a single maloca. The largest maloca in the Northwest Amazon region is a 16-household dwelling with eight compartments ranged along each long wall. The smaller dwellings of the Independents can augment the size of a community. The fact is, however, that an Independent household has usually been formed for personal reasons, such as a quarrel with the headman, rather than for reasons of crowding.

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

621
592 the headman, rather than for reasons of crowding. The Cubeo believe that one roof unites a community while several roofs divide it.

621
311 Size of maloca is adapted in some measure to cultivable terrain. We have already noted that seasonal flooding and the requirement of good river frontage limit the availability of land for relatively permanent cultivation. But these are highly variable factors. Along the Vaupés, a deep river basin that can carry a great volume of water, there are vast stretches of dry land that have become the sites of civilized population centers. There is no doubt that from terrain alone the Vaupés could have supported far greater Indian populations than it did at the time of first contact. Along the Vaupés the limiting factor seems to have been social. On the Cuduiarí, on the other hand, land contours are such as to divide frontages into much smaller segments. On this smaller stream, terrain has been a more significant factor in limiting community size. But even on the Cuduiarí, land utilization is
[614] subject to strong social considerations. One consideration is that sibs must retain their traditional boundaries. This means that with slash-burn horticulture the sib territory must provide, as a minimum, a three-step cycle in which a community returns to its original land after 10 to 15 years. The well-situated tract must then be at least three times the average land requirement at any given time.

361
244 There is still another consideration, and that is the distance of manioc gardens from the residence. When they prepare a clearing, the Cubeo bear in mind the distance a woman will have to trudge with her burdens of manioc, a baby, and firewood. That is why the gardens are laid out along a semicircle. Bitter manioc is a cumbersome crop. It needs reasonably dry soil and it makes heavy demands upon the time and energy of a woman for its cultivation, transportation, and preparation. Whatever can be saved from travel time is an advantage.

621
182 The thesis of ecological adaptation, however, can be argued most successfully in the abstract. If one notes the actual events in the life of a community, then the processes of community growth and community fission appear in quite a different light. The balance of forces of fusion and of fission that hold community size to its stable limits in harmony with the natural environment are not entirely economic. They often include personal factors. To state this more precisely: the economic factor affects fusion strongly but has less direct bearing upon fission. Satellites, for example, are urged to return to the fold, guests
[578] are urged to stay on, and daughters are invited to take up residence in their own sib if there is ample land. Splitting, on the other hand, occurs because of personal quarrels and rarely because of a feeling of land shortage.

SQ19 Tucano SQ19
CUBEO

at a distance from the water and is kept sanitary by action of the sun. The dump receives the body wastes of the very young children.

THE MALOCA

The maloca (*kenámi*) is no mere shelter or sleeping barracks. It is a vital social center, the very focus of social and religious life. Under its great gabled roof all ceremony takes place, the dead are buried, food is prepared, and almost all implements and articles of use are manufactured. The Cubeo are largely an indoor people. Children play outside and there are occasions when the older men sit on the plaza in the shade of the house. But in the main, adults spend their leisure time indoors, lounging in hammocks. Guests are received at the doorway of the house, the hosts standing always within, in the formal exchange of greetings. Having been welcomed at the door, guests are ushered to low benches set at an angle near the doorway and facing inward.

When I came among the *Bahúkiwa* they were on the upswing, having come from a creek site to the main stream. In the new site they had put up several smaller houses and the framework of a large 12-compartment maloca was in place. This large house, of standard size, was 75 feet long, 55 feet wide, and 21 feet high. The eaves of the hip roof extended six feet past the low side walls. The new house is always the work of the headman. It is started on his initiative and the work is carried on with his active encouragement and under his direction. The leadership qualities of a headman are precisely reflected in the maloca, in its size and in the care that is taken in its construction. The headman is known as *kenámi upákü* (owner of the house). The house is his, in the sense that one who is not willing to accept the authority of the headman will not live in the house. A house, the Cubeo believe, cannot tolerate dissension. Whatever the genealogical relationships of its residents, they are the equivalent of a joint family. The Cubeo are decidedly uncomfortable if the atmosphere of a house is lacking in familial warmth. If necessary, they will overlook discourtesy, uncooperativeness, and sullenness in the expectation that such behavior will be only a passing phase. Nevertheless, they are acutely sensitive to one another's moods and before too long one sullen individual will have infected them all. Then someone will move out and all sense the impending dissolution of their community. The smaller house that will now be built alongside does not remove the source of disaffection. It stands rather as a reminder that they have not been able to get along with one another. The headman is

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

of the pull of propinquity. The Cubeo welcome and respect neighborliness.

The river has its natural boundaries. These are the segments of river demarcated by rapids and by the tributaries or creeks. A boundary is from one such feature to the next, from a *cachoeira* (rapids) to a creek, from a creek to a creek, but rarely from *cachoeira* to *cachoeira*. A boundary defines only sib territory. There is no phratric territory as such. If there is phratric and tribal territoriality it is because each of the sibs undertakes to defend the principle in terms of its own interests. A sib may adopt a stranger and in this way incorporate it into the phratry. It needs no permission to do this. On the other hand, a sib may appeal to phratry mates for help in warding off by force unwanted intruders. Boundaries do not close a river to traffic. The river is always an open highway for travel, and travelers may fish and hunt along it freely. They may not put up fixed installations such as weirs or show other signs of residence such as fishing a particular spot with regularity without permission. Men regularly fish only within the sib limits. The discussion of boundaries, it should be explained, does not flow naturally from the Cubeo. It is drawn out by the ethnographer. The Cubeo are not jealous of boundaries and they rarely have issues over them, but they do know them. Occasionally someone violates the common law of courtesy of the use of fish weirs and keeps the barrier closed beyond the allowable period. The Cubeo cannot and do not attribute this unmannerly act to gluttony. Gluttony is an incomprehensible notion to them. They attribute it either kindly to forgetfulness, in which case there is no issue, or to unfriendliness, in which case there is a quarrel and an effort is made to tear down the barrier. On the forest side there are no boundaries at all except for the clearing itself. It is not land but river frontage that is valued.

CANOEING

So much of a man's time is spent in a canoe that no description of native life would be complete that did not relate the Indian to the river as a canoeman or that failed to bring out the motor rhythms of canoeing. Motor rhythms are patterned, the rhythm of paddling and the characteristic rhythms of the dance showing particularly striking parallels.

Paddling follows a definite though irregular rhythm. The prowsman on a long trip is keeper of the stroke. Paddling is noisy. On the downstroke the stem of the paddle just above the blade is struck

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

To produce farinha, which is mainly for trade, and chicha, which is mainly for sociability, she draws upon what is normally her "spare" time. She gives up the evening hours of rest, moments of gossip, play with her breast baby, and food foraging in the brush, which she regards as a pleasant diversion from the back-breaking manioc routine.

A Cubeo woman cannot be coerced to work any more than a man can be. Her willingness to work hard depends, in the case of a married woman, upon her regard for her husband in the first place, but also upon her general relations with the community at large. The Cubeo know that a lazy woman is a disaffected woman and they are conscious, accordingly, of the social importance of marital felicity. The only control the community has over a domestic situation is by maintaining a generally high level of good feeling. Needless to say, Cubeo women are not and do not consider themselves to be abused. A woman who does not care for her husband will leave him or, if her laziness is deep-seated and represents a grievance against the community as a whole, she will urge her husband to leave with her. The fact is, the feeling against indolence or apathy toward work is so strong that even a thick-skinned person can sense the unvoiced community disapproval. Thus, in the absence of strong political authority the productivity of a Cubeo community depends in the main upon all of the subtle factors of kinship, sexual attractiveness, and satisfaction, and of public morale. An unproductive community is normally not underprivileged by virtue of location or of tools but simply by its own lack of social health.

FISHING

Fish are abundant and there is hardly a day when fish are not part of the diet. The basic Cubeo meal consists of manioc cake and fish. Every male, from puberty to the grave, is a fisherman. Fishing is the regular masculine routine. Most fishing is individual – a man sometimes accompanied by a young son in a small canoe fishing with hook and line, or a man (also accompanied by a young son) fishing in shallows with bow and arrow. An Indian fishes his own stretch of river at a preferred place. If a man wishes to join another at the same place there is no quarrel, since fishing is never competitive. There is some rivalrous display of a catch but only a good-humored kind. Unlike gardening, which follows a rigid routine, fishing is flexible; a man follows his hunches and preferences, the seasons, and the species of fish and their habits. Some fishing is by torchlight, at night. The men do not necessarily leave for the river at the same time,

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

The phratry, with its extension of kinship along a large section of river, provides for amicable settlements of boundary disputes; these arise, however, over river use only, never over cultivated land. There is no thought more repugnant to the Cubeo than that one should cultivate land that has been cleared by another. When a woman dies her manioc plots are left to be grown over after the mature tubers have been harvested, so strongly do the people feel about the intimate relationship between land and its cultivator.

Within the sib territory, male household heads arrive at individual or, more often, joint decisions as to the total clearing and the allocation of household manioc plots within it. An individual may select any part of the sib territory for a clearing, although by tradition and for reasons of convenience the plots are contiguous and the clearing is one large space. Preparation of a clearing is most often a collective effort supervised by the headman. Even as they begin to prepare a clearing the household heads discuss their individual allocations and stake out a location. There are two ways in which the cultivation of a clearing can be organized. The preferred way is for the headman to organize a collective work party, including all household heads. If this cannot be arranged, either because of lack of agreement about a joint move or because some male household heads are away in the rubber forests or in some other work, the move is made gradually. Then the headman and his close associates are the first to move to the new location. They start the clearing by preparing their own plots, establishing a bridgehead, so to speak, for the rest of the sib. This method of moving over to a new location indicates how little anxiety the Cubeo feel about getting a choice location. When the later arrivals come they can count upon help from the headman and the earlier settlers in preparing their own clearings. The general clearing begins initially as a narrow semicircular band so that each plot is about the same distance from the house. The band is then widened by each household in accordance with its needs for new land. Annually, during the short dry seasons, a household head and the other adult males cut down and burn over the timber, outward from the *chagra*, to extend the cultivations. Manioc can be harvested at from six to 24 months. A providential family allocates one section of a field for a two-year harvest.

A manioc cultivation is always spoken of as belonging to a woman. A woman says, "This *chagra* was made for me by my husband" (or "my son" or "my brother"). She is the sole administrator of the plantation and may assign sections of it to her daughters, to her daughters-in-law, and to guests who have come for an extended visit. The

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

244 will lack food, but that she will lack a role in chicha preparation and
423 be deprived of trade goods. Her fear is for loss of status.

[261] The *chagra*, to summarize, is a well-defined item of property. It is
[602] the domain of a particular woman, in the sense of economics, in the
[558] sense of status, and, as mentioned earlier, as a kind of sanctuary. No other land in the community has this character of particularity. All other cultivations, including pupunha orchards, belong to the cultivator, but the land on which they are grown has no standing as personal property. Whereas the manioc gardens of a household have contiguity, to the point where a son clears a plot for his wife adjacent to that of his mother, the variety of its other cultivations are scattered over the entire settlement.

241 With respect to all secondary crops, there is also very clear recog-
423 nition of ownership. Each planting has its known owner, who may be a man, a woman, or a child. Ownership rights are scrupulously
[622] respected, and no one would consider disturbing another's plantings without permission. Tobacco, coca, and *mihi* are generally grown for
[431] the community by the headman, but are recognized, nevertheless, as his plantings. He also contributes to the community all of his pupunha harvest. But it is precisely because he contributes to the
[183] community that his ownership is clearly acknowledged. The point,
[431] of course, about Cubeo property relations is that generosity and sharing go along with the assertion of individual rights. The privilege of the individual as a *giver* is thereby respected. The least formal
249 sharing involves sugar cane. It is understood that everyone is entitled
423 to the simple refreshment of a freshly cut stalk of cane. Even so,
431 adults who do not have cane of their own prefer an invitation. Children, on the other hand, do not stand on ceremony. Yet even a very young tot who is cutting a stalk does so with the announcement, "I am now cutting the cane of my older brother," or whatever the kinship connection may be.

226 On the river, the masculine domain, the men have staked out sites
423 for placing weirs and fish traps. The setting of weirs is the one ter-
614 ritorial issue that disturbs the harmony between sibs along a river. Weirs are commonly set in a *caño*, in which case they are a purely intrasib matter. If, however, men block the main stream they are obligated to allow fish to pass through periodically. "Sometimes they
[578] forget," I was told, "and then we go and tell them. But if they are mean then we go at night and break up their weirs." Such disputes
423 are not common. Within the sib the issue is not of weir rights but of
226 specialization in fishing methods. A man develops a preference for weir fishing, he troubles to prepare the cumbersome equipment and

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

present them to her new husband on the principle that the economic balance of the household should be maintained.

FOOD

Food passes among close kin and rarely goes outside the sib. The household is, of course, the primary food-sharing unit. Its members eat all informal meals together and up to a point where it becomes arrant discourtesy the members of a household are privileged to take all their meals separately. The maloca group, nevertheless, is the common body that shares the formal evening meal. The setup of the maloca is such that only small quantities of cooked food can be prepared over a household's hearthstones. Manioc cakes and large quantities of food call for the use of equipment that is the property of the maloca, having been presented to the maloca by the headman or by some aspirant to headmanship. No household, however, has to share food merely because it has been prepared on common equipment. The common equipment stands as a reminder that the maloca is indeed a single house occupied by a single family. People eat together because they are conceptually a single family. When members of a household are cross with others in the maloca they prefer to eat alone, for it seems absurd to the Cubeo to eat with someone with whom you are angry. Ordinarily, however, households breakfast alone; they may or may not have a midday bite with other households, and they will ordinarily take the evening meal, the major meal of the day, together. Unmarried girls eat with their parents; young men, however, enjoy the hospitality of each married brother's household. Independents, those members of the sib who are of the community but not of the same maloca, eat their ordinary meals separately and join the maloca for a gala feast, when there has been a great catch of fish, or when tapir or wild pig has been brought in. On such occasions a portion of the food may be sent to the Satellite communities, or the Satellites may be invited to come and take part.

The following observed event illustrates some of the principles of distribution of game. Four hunters had shot and brought back four peccary, one animal each, as is customary. Three of the hunters were blood brothers, but of two different mothers, and the fourth was their father's brother. Among the brothers, two were unmarried. The youngest of the unmarried men presented his peccary to his mother, who singed it for him before he took it down to the river for butchering. The others made no formal presentation of their game but did their own singeing and proceeded to the river's edge to prepare their

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19

others. I doubt that any nonsharing goes unobserved and I expect that the nonsharer is not too concerned with being unobserved. Often enough, boys will quarrel about the distribution of food, but never with a nonsharer. They sense the significance of the gesture and are embarrassed by it, waiting for the delinquent to finish. He rejoins them and their play resumes as though nothing had happened. Elders will not correct nonsharing among children because they regard what the boys do in the play pack as a matter of no adult concern. I was never aware that the children themselves ever rebuked or punished a nonsharer in their midst. The nonsharer always received his portion. The play pack leader, who does not hesitate to censure a member for indecent sexual behavior, is comfortable in his role as a giver and will not censure a nongiver. He understands, to be sure, that nonsharing is a form of deliberate estrangement from the intimacies of the group, but he also knows that no headman will censure a household head who chooses to become an Independent or a Satellite. Similarly, the nonsharer may estrange himself from the play pack but the play pack will not ostracize him. Among the *Bahúkiwa* the flagrant nonsharer was also the boy who ran away during the ancestral whipping rites. Every example of a case of nonsharing that came to my attention (five or six only) was that of a boy who had no father. Orphan boys are deprived of one of the more pleasurable intimacies of receiving a portion of fish or game that a father brings home. A man's son is the first to greet him when he beaches his canoe. He is given a fish or a bit of meat, which he prepares by broiling or baking and shares with his play pack. He has the status of a giver. The orphan child, in these circumstances, has the lower status of a receiver and is denied a food intimacy. The nonsharer acknowledges at the same time a status of subordination as well as of estrangement.

Among adults, nonsharing is more disturbing and more consequential. A man who does not share food eventually refuses to do his share of work. Such a person is called "one who does nothing." A household head who is angry or out of sorts will not join the sib meal but will gather his family around him at the household hearth for a private meal. A mood is respected and the incident passes with little notice. If it is repeated, it is assumed that the nonsharer will soon move out and become an Independent. Nonsharing does become a touchy issue when food is scarce. We were experiencing hungry days during the height of the rainy season, most meals consisting of manioc cake dipped in peppers, fortified occasionally with a minnow. One late afternoon a household head entered the maloca with a

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

261 183 571 431 string of two fish. Momentarily all eyes turned hungrily and happily toward him, only to encounter the averted eyes that told plainly that he was not going to share. The man walked directly to his own hearth and gave the fish to his wife, who was awaiting him there with the children. She took the fish in silence and quickly set about preparing it, never once turning her eyes out upon the maloca. The house filled with an appetizing aroma that it had not experienced for many days. Everyone pretended not to notice it. The little family sat glumly around its pot of fish, eating in silence and with averted eyes, observed only by the young children, who did not, however, venture near. One man made an effort to break the melancholy spell that had fallen over the maloca. The effort failed. A visitor to the maloca the next morning, however, would have been unaware that the previous night had been a miserable one.

261 183 571 431 522 During this same period of hunger I also saw a household head prance into the house holding before him one little minnow. He chanted in a comic vein a little ditty to the effect that he had singly caught this monster of a fish and that now his wife would prepare it and all would feast, putting an end to their hunger. With a grand gesture he gave the fish to his wife, who giggled merrily and, helped by the women, prepared it. The meal that followed was about the gayest I had attended. This is correct procedure. A responsible household head does what he can to boost morale. The nonsharer has a deadly influence upon a house and in the end he will have to leave. The Cubeo know very well what nonsharing means: He does not like us.

261 183 571 431 578 No one will be asked to leave his own kingroup except in a fit of anger. Just as the boys of the play pack will only stand aside as their nonsharing comrade gulps his food privately, so the adults will do nothing but pretend not to notice the nonsharer in their midst. "He does not have to share his food if he does not want to," they say in extenuation. When the nonsharer refuses to do his share of the common work, he adds to the sense of grievance against him, but the crisis is subacute. It becomes acute when his wife no longer goes to the manioc garden and asks other women for manioc cake. Then it will be said, "He has a lazy wife, they are not good." At the next drinking party they quarrel, all the resentments are aired, and the dissatisfected household departs. I was told, but could not verify it, [754] that in the end chronic nonsharers are killed by sorcery. Such people, it is said, become wanderers, imposing upon the hospitality of kin and of friends. Since they are basically uncooperative they annoy everyone until someone in a fit of anger decides to put them to death.

SQ19 Tucano SQ19
CUBEO

Without a proper sib name, a child will not grow, the Cubeo say. Growth is an attribute of the Ancients. The giving of a name is one of the ways in which the growth magic of the Ancients is utilized. These names from the sib genealogies are not used freely, the Indians preferring to use Christian names and to address one another by a kinship term.

The sib has permanence and it has continuity with the past. The "history" of each sib is known and is recited at all major ceremonial occasions.[5] In narrating sib "history," distinctions are drawn between original sibs, later comers, and the newest-formed sibs. Since ancientness is honorific and the Cubeo have a sentiment of egalitarianism, these distinctions are underplayed. But when people have been drinking and quarreling the matter of ancestry will be brought up.

The tradition of phratric organization is that all its member sibs are kin. Tradition holds, too, that once all sibs of the same phratry were united under a single headman. But this tradition may refer to the scheme of sib rank and the acknowledgment of the leading sib as the "head" rather than to an actual political organization. On the other hand, since there is little doubt but that tribal organization in this region of the Amazon is highly fluid, with smaller segments forming new enlarged formations and enlarged formations breaking up again into smaller and relatively more stable sib segments, the tradition of the phratry as a political unit cannot be dismissed.

The Cubeo distinguish between *kwinâwü* (one kin) and *abéwetema* (they are not ours) in referring to their own phratry and to an opposite phratry. In the past, there may have been at least four phratries, since the traditions speak of one group of sibs as having amalgamated with another. Previously these two groups had intermarried, it is averred. According to one version of the origin myth the sibs of a phratry are all descended from a single water anaconda called *Pwénte ainkü* (Anaconda person), who divided himself into segments, the head becoming the leading sib of the phratry, and each subsequent segment forming the remainder of the sib hierarchy. A variant version states that pairs of anacondas emerged from a crevice among the rocks of a rapids, shed their skins, and formed a brother-sister pair. Subsequently, the sisters married out and the brothers took wives from people they met in their wanderings. The first pair to emerge were the head sib, and they gave names to all that followed

lapsed, out of simple neglect. Also to be considered in this connection is the common Cubeo view that the life of past generations was more severe than it is today.

[5] The text of the *Bahâkiwa* "history" follows the sib list in this chapter.

SQ19 Tucano SQ19
CUBEO

622 692 No Cubeo headman has rights over person, over life, or over property.

622 614 574 273 156 Within the sib, the headman is the firm but gentle father, ever watchful of the welfare of his sibmates. There is, however, another side to the office. As representative of the sib within the phratry he is the organizer of drinking parties in which the prestige of the sib and his own prestige are involved. An ambitious headman urges his people to produce more chicha, to entertain often. His pressure may become burdensome on the people and his influence within the sib is, accordingly, jeopardized. The *habókü* with more commanding [554] presence can push people farther, it is said, than the ordinary *kenámi upákü*. While drinking parties are enjoyed and sibs are conscious of their own heightened prestige as givers of chicha, they suspect that [47K] their headman is pushing himself forward too strongly and they resent it. To forestall such resentment a headman urges household heads to join as cosponsors of a drinking party.

622 614 571 578 156 The headman is charged with preserving the unity of the sib. While concern with personal prestige is not lacking, this consideration of his must be secondary to the welfare of the sib. He must prevent splitting of the sib. If a household leaves, the headman is blamed. He is blamed if sibmen's quarrels reach a dangerous point. When drinking parties erupt in violence the women taunt the headman with his inability to restore order. Yet in asserting leadership the headman dare not be too forceful. Father Giacone has observed [157] about the Tucano Indians that they are docile. The same can be said of the Cubeo. A man will not, in fact he claims he cannot, resist a direct command. He will obey and be resentful. No householder who had unwillingly submitted to a headman's command would long remain in the sib. Moreover, the Cubeo do not easily tolerate social tension. If the atmosphere in the house becomes unpleasant someone will certainly move out. Men will not work, hunt, fish, or join in any collective undertaking if the atmosphere is not cordial. Maintaining this atmosphere is perhaps the most difficult charge upon the headman.

622 648 156 The headman who must deal with white tradesmen and with labor recruiters has the additional burden of representing his community against men of very forceful personality. He finds that he dare not submit to the common weakness of docility and must match their [614] forcefulness with his own. A headman who has learned to deal with the white man on equal terms will tend to be more authoritative within his sib as well.

000 There is much talk in the region about powerful chiefs, but no

SQ19 Tucano SQ19
CUBEO

622 627 tempers but to inflame and to focus angry passions upon the culprit. He does so because the Cubeo do not tolerate a judicious and cold-blooded administration of punishment. Their view is that malicious [673] acts are committed in anger. Such acts provoke anger in return, in the course of which the culprit is suitably punished. Thus, a wrong-doer always runs away. Even if he should regard himself as innocent of the charge, when he learns that charges are being discussed he deems it prudent to leave. He need not be gone very long – perhaps just a few months. When he returns the anger against him has died 622 down and there will be no basis for action. In cases where a sibman 627 is being provocatively uncooperative and the senior households, to- 574 gether with the headman, agree that he should be made to leave, 614 they wait for a drinking party when someone, or the headman him-self, picks a quarrel with the culprit. In the heat of the quarrel the [182] unwelcome sibman is asked to leave. The traditional drinking party seems to serve as the most appropriate setting for the airing and settling of grievances and of disputes.

578 574 Fighting is the most common social disturbance and is inevitable during a drinking party. A quarrel between two men draws in others, usually close kin; each man entering the fray loudly proclaims his reason for joining, justifying by anger his right to take part. Members of the same household always have justifiable cause for anger in assisting one another. More distant kin must cite a personal motive. They can claim a past insult. A host or headman is privileged 578 to intervene to stop a fight but will do so reluctantly. In a Cubeo 574 quarrel the detached bystander is not welcome. Women are usually 622 strongly disturbed by fighting. They dread that someone will get hurt and when a fracas becomes bloody they loudly demand that the headman put a stop to it. If he ignores them, pretending to be drowsy with drink, they abuse him and say he is not fit to be a headman. A headman is drawn to anger and to participation in a fray if a cere-578 monial friend has joined a fight without asking his permission. 574 Ceremonial friends are as one and should share the same quarrels. [572] Fighting at a drinking party, although actually disliked by the Cubeo, is not a punishable offense, since the angry parties have had full opportunity to retaliate. When the fight is over the issue is usually closed, unless new threats and insults are uttered. Those will be remembered at the next drinking party and serve to start a new fight.

682 Retaliation for murder is the responsibility only of the members [614] of the victim's own household and lineage. Sibmates are under no obligation to avenge a murder unless, they reason publicly, the mur-

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

derer, having killed one sibmate, is surely planning to kill others. However, such reasoning is more appropriate in cases of sorcery than in cases of direct assault.

Among the *Hehénewa*, I was told, a man was beating his wife when his own brother, who had no apparent cause to do so, intervened. This led to a quarrel. While they were quarreling they heard a monkey howl, always an omen of the impending death of a kinsman. In alarm, each took his gun and together they went to the river to shoot the monkey. There the wife-beater shot and killed his brother, claiming that it was an accident. However, he decided he had better leave. Later that day, when a third brother learned what had happened, he set out to find and kill his fugitive brother. The police, however, learned of the shooting and induced him to find the killer and turn him over to them. This he did. The culprit spent some months in jail and was released. By that time anger had subsided and the brothers were reconciled.

Should a man kill his wife only her kin will avenge her. There is no one to avenge or punish a father who kills his children. The only example of such crimes that I have is of a madman, but it does illustrate the point. According to the account given me, this man, crazed by hunger, killed and ate his children. He then attacked his wife, cut off one of her breasts, roasted it in the fire, and ate it. No one interfered "because it was his own wife and children." The man then cut a piece from his own thigh. The people watching said, "Let him do this. It is a good thing that he should die." They watched as he then cut his throat and died.

I also learned of another example of unavenged death. An old *Bahúkiwa* man had died and the inquest named a man of a related sib as the sorcerer responsible for the death. The sibmen threatened vengeance. Some days later the alleged sorcerer innocently came to pay his respects to the dead. He was coolly received, but no hand was raised against him. When I asked about it I was told that no one felt close enough to the old man to want to avenge him. The widow was still angry, but women are not avengers even by means of sorcery.

Theft to the Cubeo means stealing food from a garden. Thieves pull up manioc tubers in the dead of night and they steal *mihí*. Both offenses are regarded as serious and incomprehensible. The theft of *mihí* is all the more culpable because it is a sacred drug. Such theft is correctly interpreted by the Cubeo as malice and is attributed only to men. If caught in the act the thief, even if a sibmate, is severely beaten or killed. Theft of objects is simply not acknowledged.

Development of the Individual

The development of individual character is always relevant to an understanding of social organization. In the case of Cubeo social organization, founded, as it is, upon the lifelong continuity of the sibling group of males, the psychological factors are of particular importance. The following discussion will attempt to show the relationship between some of the experiences of a Cubeo from infancy to adulthood and some of the formal principles of Cubeo social organization. By and large, Cubeo social organization must conform to the direct psychological dispositions of its members for the commanding reason that the people have a low tolerance for psychic discomfort. The sib, as we have noted, is readily split; this means, in psychological terms, that those who find any cause for dissatisfaction with life within the community are quick to leave. The community, therefore, is constantly being drained of its malcontents. Those who remain are, in a manner of speaking, in harmony with one another. This harmony, it should be said at once, is not that of homogeneity. It is based rather upon individual complementarities, of extraversion-introversion, active-passive, and leader-follower, as in any community. The harmony is between the requirements of adult life and the experiences of childhood.

The Cubeo use the following age-grade terms. The nursing infant from birth until it learns to crawl is called *abohoidjó* (male) or *abohokö* (female); a crawling infant is *tcumi* (male or female, although *tcúmiko* is possible for the female); the walking child who

SQ19 Tucano SQ19
CUBEO

574 of drinking parties that drew guests from every sib. For the
614 *Bahúkiwa* this was a considerable social triumph since, being rela-
554 tively low-ranking, they would ordinarily have had more modest social ambitions. Eventually this activity tapered off, and by the time I left the drinking parties had become very small and subdued.

574 Social rivalry is only an undercurrent of the drinking party, for
571 nothing is more reprehensible than open boasting. A sib must also
614 be careful not to overdo, for then people will regard it as too pre-
[578] sumptuous and will not attend. At the conclusion of the most successful of the parties given by the *Bahúkiwa*, when the headman was beaming at the sight of the immense and disorderly throng drinking and dancing in his still-uncompleted house, the guests were already saying that he was overdoing matters. Some told me that they suspected the headman of wanting to become leader over the river. The
[152] anxiety of the host as to whether his guests will come is matched by
[578] that of the sib that fears it may be ignored when the invitations go out. The normal expectation is that all will be invited and that all will come. At the same time, the drinking party is thought of as a display of friendship and trust, so that if there is any cause for rancor between sibs they will not attend one another's parties. Thus, when sibs that have been invited do not attend and sibs that should be are not invited, speculation is provoked as to why. Some speculation can take an angry and morbid turn.

574 In its predominantly positive aspects the *unkúndye* has a tonic
614 effect upon the life of almost the entire river. It is particularly bracing to the host sib. An intersib drinking party is given both in the name of the sib and in the names of individual sponsors. The instigator and chief sponsor of a party is, of course, the headman. He will invite cosponsors, usually but not exclusively the male heads of the individual households, so that he can count on the full cooperation of all. The week or so of active preparations demanded by a good-sized *unkúndye* is, in spite of heavy and often round-the-clock labor, a very happy time. The Cubeo regard collective effort that is carried out in good spirits as a great happiness. The preparations for
574 the *unkúndye* mark one of the very few occasions when men, women,
462 and children are all working together. Males normally avoid contact
252 with manioc that is being prepared as food. But they do handle many
522 stages of manioc being prepared as chicha. Even so, to handle manioc in any form a male must adopt an appropriate attitude of levity; it should appear that what he is doing is a game. The women thus are surrounded by rollicking men and are readily infected by their gay mood.

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

of the *unkúndye* then it should be said that it is the women who supply the charge that explodes the emotions and issues into the open.

Because they are so much in the background during everyday life, compartmentalized in the manioc garden as in the house itself, women are strongly stimulated by the social heterogeneity of the *unkúndye* as by the inherent excitement of drinking, dancing, noise, and close body contact. The women's responsiveness seems to be spontaneous from the very beginning of the drinking party, whereas the men groom their emotions by stages, until at the end they are responding with a spontaneity of their own. The spontaneous emotional excitement of the women feeds into the emotional pool, so to speak, of the whole *unkúndye*. During the great mourning festival with its ritual eroticism this counterplay of men and their formal ceremoniousness and women and their emotional spontaneity leads finally to a unified response that is ceremony deeply charged with feeling. At the mourning ceremony this juxtaposition of male and female roles is very evident. And it is because of my observation of the mourning ceremonies that I have been led to see each drinking party in a similar fashion. In short, for the men the drinking party is collective and ritualistic; for the women it is individual and personal. In the end, these two roles are fused so that the aim of strong feeling within a formal setting is achieved. Perhaps it would be better to say overachieved, since the jealous quarrels that women provoke are sometimes serious, splitting sibs from one another and antagonizing close sibmates.

Every drinking party that I ever attended ended in a quarrel. All quarrels were sexual, either provoked directly by jealousy or by disparaging remarks about a man's virility. The quarrels may lead to minor violence and may have no consequences. Sometimes, however, they stir up unexpectedly deep layers of feeling. A fresh affront recalls earlier offenses. These are aired. Before long the disputants have brought out a tangle of charges and countercharges revealing long smoldering issues. Men start a quarrel over an accusation of adultery. One man then comments that the father of the other had once said that he would not mind if his, the complainant's, sib were to die out. It is a remark of this nature that suddenly and chillingly transforms a simple quarrel into a later suspicion and then open accusation of sorcery, should someone sicken on either side.

The quarreling of men sounds more violent than it really is. If they are content to merely pummel one another with their fists there is little interference except that the women fret anxiously. Should they reach for dangerous weapons they are restrained and content

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

themselves with an exchange of vituperation. Brothers will defend one another, as well as sibmates, so that a quarrel is difficult to isolate. The men listen to the vituperation and, far from regarding what is said as meaningless drunken chatter, draw implications that may involve them. What began as a quarrel between only two men over one man's wife can become a maloca-wide brawl. Then the sibs taunt one another, each reviling the other's weaknesses and calling attention to its own strength. It may all come to nothing. A diplomatic elder calms tempers; the headmen remember their obligations to preserve the peace at drinking parties. Some disputants have enough sense of humor to laugh. It can all blow over quickly and will then have served as another way in which feelings are lightened, provided the sinister specter of sorcery has not been drawn in.

The following is an example of a quarrel at a drinking party. A man began to beat his wife because she was dancing too often with the same man. The latter remonstrated and soon he and the angry husband came to blows. The bystanders remarked that the husband's jealousy was unwarranted. Encouraged by these remarks, the woman's father got angry and attacked his son-in-law with his fists. The son-in-law did not defend himself, whereupon the old man calmed down and proceeded to explain to those present that his daughter's conduct was altogether proper. At this point the wife became enraged, and flinging herself upon her now pacified husband, pummeled him soundly on the back with her fists. Since he did not strike back her fury subsided and this incident blew over.

However, another young man who had been witnessing this violent flurry began in a tearful voice to inform his audience that his wife was having an affair with a phratry mate of his. He named the woman's lover, who was present, but for the moment said nothing. The accused's father, however, jumped quickly to his son's defense, shouting that the charges against his son were false. The jealous husband turned upon the old man and shouted at him angrily, "You are already an old man. It is time you were dead!" At this, the accused man rushed forward, livid with fury. In a hoarse voice he shouted to the assembly, "Did you hear? He is planning to kill my father." But the jealous husband was already beyond calming down. Instead he shouted back that the sib of the accused adulterer was weak and few in numbers, whereas his own sib was strong. With these ominous remarks this incident closed, for the time being. All felt that the outraged husband had gone too far. No further remarks

were exchanged, but the two sibs did not invite one another to their drinking parties for the remainder of the season.

614

. Sorcery is the great fear. All illness is attributed to sorcery and so are deaths that cannot be readily accounted for. When the drinking party is over and someone has become ill, the quarrels will be recalled and a phratry brother will be charged with sorcery. If the shaman bears out the allegation, the sib of the accused will not be invited to the drinking party of the afflicted sib. In the course of a ten-month stay on the Cuduiarí I have seen drinking parties go through a cycle from full participation by most of the sibs to dismal solitary affairs where subdued members of the sib drank with one another and a few friendly phratry mates from closely adjacent sibs. When the fear of sorcery begins to grow, accusations may strike within the sib and split it down the middle. Gradually confidence is restored, headmen begin to think again of large *unkúndye*, and step by step the scale of attendance mounts.

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

571
621 households, and individuals. Fission is an objective social process, a by-product of Cubeo cultural principles of autonomy and social equality. It is promoted, as well, by another cultural principle that we have not yet discussed. That principle I would describe as a low tolerance for psychic discomfort. That is to say, in the absence of political constraint and of economic necessity the Cubeo find it easier to leave an uncomfortable situation than to endure it.

PERIODICITY

571
614 Since the sibs join together on the basis of linkage-autonomy and upon lateral rather than hierarchical lines, some loosening of bonds
(574) would seem to be inevitable. The periodicity in drinking parties is the only measure we have of changes in the strength of attachment of sib bonds. These parties, we have noted, follow a cycle starting from full attendance and a very high state of mutual confidence and ending in a series of parties that are poorly attended and are conducted in an atmosphere that is dismal and heavy with distrust. Eventually confidence is restored and a new cycle begins. The period from high to low runs about one year. Periodicity is not a cultural principle; it is a consequence of several other cultural principles. As already suggested, linkage-autonomy and lateralization play a part in this periodicity because they allow relationships to find a "natural" level. That is to say, there is no formal authority that can step in to restore good relations when the social climate has been poisoned by
(621) drunken quarrels and by accusations of sorcery. Periodicity is perhaps
(615) to be regarded as an incomplete form of fission at the level of the phratry. Since the phratry is a stronger exponent of autonomy than is the sib, it develops only a few of the pressures that might lead to actual fission. As for other principles of Cubeo culture involved in the periodicity of sib bonds, we have already mentioned the low tol-
571
152 erance for psychic discomfort, and have described its relevance to fission of the sib. In the context of the drinking party, and indeed in the context of all collective activities, this principle can be stated in still another way: that collectivity demands its appropriate atmosphere of good feeling. We have seen this principle strongly at work in the mourning ceremony, where the atmosphere of grief, grimness, hostility, suspicion, and fear is systematically and ritually trans-
• (578) formed to one of excitement and gaiety. We have also observed that the Cubeo do not harbor grudges for long. When a feeling begins to subside they allow it to subside. When a more neutral atmosphere forms, a new cycle of good feeling can begin.

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBE

571 619 autonomy principle, strong tribal leadership would provoke fission and would then have to become remarkably strong to overcome the disruptive forces it had set in motion.

571 606 607 593 [583] [616] [582] [614] Between in-laws, the linkages are more diversified and hence are stronger than those between fellow tribesmen. The system of exchange marriages creates a particularly close set of bonds, because it draws upon the powerful nuclear bonds between brother and sister and supplements these with preferential marriage into the sib of the mother. There seems to be a potentiality for moiety formation in the Cubeo system. But this potentiality is never realized because of geographic distances and the wide ranges of marital choice, intratribal as well as extratribal. In the case of affinal sibs, the thesis of inherent antagonism is counterbalanced by the brother-sister tie. When that tie is dissolved, as by death or divorce, the antagonisms may begin to loom large, and what were formerly close ties will begin to dissolve. In this orbit of in-laws, however, equilibrium does not really demand fixed ties, since the affinal relationships are eminently interchangeable.

571 615 In the orbit of the phratry, the bonds are more impressively substantial, based as they are upon tradition, upon the fiction of blood kinship, and upon contiguity, hospitality, and ceremonial participations. These bonds of attraction are all the more impressive because there is so little to oppose them. There is no phratric leadership and there are no secular tasks to provoke possible conflict of interest. 571 614 578 [615] [754] Nevertheless, latent hostilities dramatized in the mourning ceremony and made seriously real in charges of sorcery have the capability of wrecking phratric unity. To offset the powerfully disruptive force of sorcery there are few specific institutional mechanisms that the Cubeo can call upon. They rely instead upon a cooling-off period of sib separation. The excited parties separate until the original fear and anger have drained off. But why the antagonisms between the sibs in the first place? Actually, the issues that disturb friendly relations between members of different sibs are fundamentally no different than those that turn sibmates against one another. They are largely the private issues of adultery and of personal insult, aggravated by intoxication and given a grim setting by the cultural theory of sorcery. Occasionally the hostile reaction is against a sib headman who is overly assertive. This situation is duplicated within the sib as well. It is not the issues, then, but their cultural context that is significant.

When men of a sib quarrel, it is relatively easy for the headman to isolate the grievance so that only the two principals are involved. In cases of adultery the device of shifting the blame upon the woman

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19
CUBEO

safeguards sib solidarity. On the other hand, when the disputants are of different sibs it is relatively easy for the issue to embroil the sibs as entities and correspondingly difficult to confine the issue to the actual principals. The fiction of phratric consanguinity notwithstanding, the sib is still, in Cubeo thought, a natural unit that holds within itself the constant potentiality of antagonism toward the fellow sib. The fact that each sib arrives at a drinking party or other ceremony armed and as a unit is the symbolic expression of latent antagonism. The ritual theme of dissolving the semblance of sib unity through intoxication is presumably counteractive to sib solidarity and antagonism. Yet this counteraction via intoxication contains the paradox of bringing the undercurrents of antagonism to the surface. To be sure, when a quarrel occurs in the late stages of a drinking party it often is isolated because the other sibmen may not be fully aware of what is going on. The safety device does work, to a degree and for a time. Moreover, some men are known to be quarrelsome by temperament and are consequently ignored. Granted all these mitigating circumstances, it is easy for a man to involve his own sib in a dispute with another. When illness and death occur, one conclusion is inevitable. That is found in the expression "*they* want *us* to die." This theme recurs in the funeral orations. Perhaps it is because the Cubeo sibs have a history of separate though related origins and a tradition of past antagonisms that present-day intersib hostility can flare, and is expected to flare, even though the issues that disturb them are, at bottom, trifling. However, in conformity with the minor nature of the disputes is the absence, in recent times, of intersib warfare. The disputes result in coolness and social distance and not in organized fighting. In summary, phratric unity is readily disturbed but never very seriously. It is restored by the process described under "Periodicity." It is because the issues are not irreconcilable that the social "governor" that restores peace by separation can work so well

The orbit of the sib has the same general form as the orbit of the phratry, with the formal difference that the sib has a leader whereas the phratry has no leadership at all. In the sib, moreover, all the ties are substantially firmer than in the phratry. Since the cultural view holds that sib unity is a natural expectation and since there are no important issues dividing sibmates, we are faced with a truly difficult theoretical problem in accounting for sib fission. The common explanation, that fission of local groups in simple societies is due simply to insufficiency of food in the immediate locality, does not apply to the Cubeo, who, at least in modern times – a period of population decline – are not confronted by land shortage. There is, in

5: Goldman E-5 (1939-1940) 1963
SQ19 Tucano SQ19

571 deed, reason to doubt the sufficiency of the ecological thesis generally.
• [578] Insofar as Cubeo culture is concerned the question is clearly a com-
[182] plex one. If we were to postulate a simple explanation at all it would be to the effect that the Cubeo experience is close to the irreducible level of stress and strain inherent in community living. In the absence of strong restraints the people respond to these stresses by leaving. This explanation is perhaps not too far wrong. It is inadequate, however, for our purpose, which is to delineate the formal principles of homeostasis in a "simple" tropical forest horticultural society. There is no need to repeat in detail the powerful forces that hold sibmen together. They include the totality of binding forces that exist in Cubeo
[857] culture. In the institution of the male play pack they draw in addition upon the psychological attractions that are formed by the closest of associations developed over the period from early childhood to adulthood. It is not until marriage that the paternal bonds of sibship begin to weaken -- and even then only moderately.

571 As in the case of the phratry, the stresses within the sib result from
614 adultery, personal insult, and resentment of authority. Can the preva-
578 lence of adultery be attributed simply and directly to the extraordi-
831 narily wide extension of exogamy that severely curtails courtship?
837 Actually, the adulterous men are not the unmarried. It is almost always the married man who seduces or is seduced by a sib brother's wife. The unmarried, as we have noted, find sexual outlet more commonly in onanism, homosexual play, and near incest. These unorthodox modes of sexual activity reaching into early adulthood seem to produce a sexual maladjustment that is most manifest in the early stages of marriage. It is consequently the young wives and the older, more mature married men who are the most common adulterous partners. The role of exogamy is indirect but nonetheless strong; it may be regarded as a natural cause of adultery and hence of internal
[562] discord. There is also an apparent symbolic cause: the Cubeo symbolic view of a woman as separatist and as disruptive of sib unity. Indeed, this would seem to be the Cubeo woman's natural role. But this natural role gains in consequence of being placed in a traditional and symbolic setting. In such a setting the expectations are intensified and it is easier for the persons to overcome scruples.

578 We have seen that the Cubeo regard female adultery as more or less
571 natural but that they regard male adultery more seriously as a
837 sign of hostility. Adultery implies sibling rivalry, which the Cubeo
593 acknowledge, but they have no specific theory to account for it. In
[564] status-conscious societies, status rivalry is a common institutional
[554] cause of conflict between brothers. Since the Cubeo lack status rivalry

CUBEO

Since the Cubeo lack status rivalry the explanation must be sought in subinstitutional relationships. The nature of food pathology illustrates one form of psychic conflict that disturbs the relationship of sibmates. In incidents of food pathology the subject was often deprived of a father, a particularized and personal tie, and displayed his resentment in a calculatedly resentful way. It may be said generally of the Cubeo that they hold to exceptionally high standards of personal warmth. When these standards are not met, as often in practice they cannot be, the people are unduly disturbed. Thus, it is not difficult for a man to feel that a brother has let him down and so seek vengeance in adultery. In a more general vein, it can be said that the solidarity of the sib has its natural psychological limits. Adultery, theft, and nonsharing are in Cubeo culture the most common manifestations of such discord. That fraternal discord may be more than superficial would be indicated by the accusations of sorcery that sometimes flash between brothers.

Unlike the phratry, the sibs have an officer whose job it is to deal with discord. The headman has no authority, but he has tact and the prestige of office. His difficulty is that since he cannot allocate punishments, assess injuries, and award compensation, he must deal only with the intangible and volatile aspects of mood. He can either soothe outraged feelings or exacerbate them, smooth over the difficulty or force a showdown and the departure of the culprit. The function of public opinion in an intrasib dispute is essentially to ratify a determination to expel a culprit. The Cubeo will prefer to overlook offenses within the sib as much as possible. But when the issue is out in the open the most likely way for equilibrium to be restored is for someone to leave. The departure of an offender is not an example of fission. When feelings have cooled he will return. Sib fission is exemplified by the Independents and the Satellites, composed of sib sections who are simply dissatisfied with the headman or with their fellows. Thus fission contributes to equilibrium by draining away the malcontents. Curiously, while the departure of the disaffected removes an immediate cause of potential stress, it leaves in its wake another form of stress in the form of a more diffuse sentiment of dismay that all is not well with the sib. The headman is well equipped to deal with this more generalized feeling, however.

The normal point of cleavage in the sib is the small group of blood brothers. True brothers form the most solid of all Cubeo linkages. The fraternal group is truly the core of Cubeo social structure. Yet this innermost orbit is far from indestructible. The Vaupés region is spotted with social "ions," free-floating men who, with their wives

he speaks well, what ones he only understands but does not speak, etc.[8]

I observed no tendency for people to claim knowledge of a language not actually known. I also observed that the Indians' terms for rating fluency, when translated into English, are *under*estimates. Thus when an Indian says he speaks such-and-such a language "some," we would be more prone in English-speaking culture to say he speaks it "quite well." The unequally weighted rating scale used by informants in Tukano is perhaps best rendered by these English glosses and paraphrases: (1) "none"; (2) "hardly any" or "just a few words"; (3) "some, but not *well*" ("well" referring to pronunciation), or "half-way"; (4) "*almost* all" or "just a little lacks"; (5) "all." To an unqualified question, an informant usually gives his *speaking* fluency rating. He must be questioned separately for ratings on languages he understands but does not speak or "hardly speaks." All these observations make it appear that the Indians are indifferent or, perhaps, blasé about their multilingualism.

Their orientation to multilingualism is instrumental and practical, but not devious. The languages used in a given situation are not chosen with motives of concealment from others. Politeness leads visitors to use their hosts' language, if they know it. Reliance on one language as against another is not considered impolite, however, and only on rare occasions, when such a reliance is exaggerated insistently and provocatively, can it signal the expression of anything resembling a militant tribal rivalry. This may, but need not, occur during beer-drinking bouts, as at a formally arranged product-exchanging and friendship-renewing ceremony between two longhouses representing two tribes; but here it should be viewed as a means for expressing and releasing accumulated, and usually minor, tensions rather than as a product of the drunken brawl pictured by most non-Indians. The stereotypes of unsympathetic non-Indians may have prejudiced accounts of some of the unsuccessful ceremonies that have received notoriety. Overt rivalry in most of these ceremonies seldom needs to go beyond the all-night competitive dancing of the separate rival troupes; and by the second day, the older men's chanting may end up entirely in the host-longhouse's language, while the younger men form one cooperative, consoli-
